Optimedia has been producing PVC and Aluminum joineries since 1994, amassing an impressive and modern production system. Since 2006, we have started exporting our products currently having more than 2.500 B2B partners worldwide.

**OUR VISION:**

To be a leader in the production of PVC and Aluminum joineries, offering support to all our partners. To achieve this, we have kept to our core principles, maintaining the quality of our products and the relationships with our partners as top priorities.

**OUR MISSION:**

To produce windows and doors that have certified and proven characteristics, manufactured and delivered to the highest market standards.

SUPPLIERS

REYNAERS, is a european leader specialized in the development of innovative and sustainable aluminum solutions. Their product offering ranges from curtain walls to windows, doors and even sliding or folding joinery systems.

[reynaers.com](http://reynaers.com)

CORTIZO has consolidated its leading position on the aluminum market for architecture and construction profiles through massive investments that have allowed it to create a complete range of solutions for windows, facades and state-of-the-art solar protection systems.

[cortizo.com](http://cortizo.com)

GUARDIAN GLASS is one of the largest and most innovative glass manufacturers in the world. Founded in 1932 in Detroit, Michigan, the company operates on five continents, serving more than 160 countries.

[guardianglass.com](http://guardianglass.com)

SAINT-GOBAIN GLASS is the european leader in the production of construction glass. The factory in Călărași, Romania, has the most modern float glass production line in Europe. The thermal, acoustic and security performances of SAINT-GOBAIN glazings recommends them for the most creative and original architectural solutions.

[saint-gobain-glass.com](http://saint-gobain-glass.com)

In recent years, ALIPLAST has become one of the leading international players in the development and production of aluminum systems for windows, doors, verandas and curtain walls. Innovation, design, technical competence and quality are decisive in this development.

[aliplast.com](http://aliplast.com)

WINKHAUS develops, manufactures and sells hardware for windows and doors, together with automatic closing, access and security systems. The german WINKHAUS group was founded in 1854, remaining a family business with over 2.000 partners worldwide.

An optimal three-chambered windows and doors system offering superior thermal performance and design flexibility. The Ecofutural variant comes with two extra options to improve thermal performance, making it ideal for more demanding projects. The hidden sash variant provides an elegant aesthetic which, when combined with the minimalist 77 mm moving mullion, gives rise to a clutterless and bright aesthetic.

## THERMAL PERFORMANCE

**$U_w \geq 1,2 \text{ W/m}^2\text{K}$**

## ACOUSTIC INSULATION

**40 dB**

## CERTIFICATIONS

Air resistance: **Class 4**  
Water resistance: **Class 7A**  
Wind resistance: **Class C5**

The 4900 sliding windows and doors system, with its minimalist design and straight lines, has a visible area amounting to only 35 mm. It stands out through the possibility of using insulating glass units up to 36 mm thick which significantly improve thermal and acoustic performances. Each sash can support loads of up to 240 kg, facilitating the creation of large elements up to 2200 mm x 2600 mm. It is an excellent choice for projects aimed at enhancing light and efficiency, both indoors and outdoors.

aluminium systems

Modern Slide is a sliding system suitable for both private residences and public buildings, bringing with it noticeable thermal performance improvements. The gallandage solution allows the sashes to be completely hidden in the walls therefore achieving a 100% opening. Available in 2, 3 and 4-way versions, it brings versatility to facade design. With profiles only 35 mm wide joining neighbouring elements, this system perfectly combines elegance with performance.

\* THE PHOTOS ARE FOR INFORMATIONAL PURPOSES ONLY

# Glass

Glass represents approximately 80% of the a joinery's surface. OPTIMEDIA equips its products with SAINT GOBAIN GLASS or GUARDIAN glazings that meet the thermal, acoustic and security requirements, whilst ensuring the desired indoor ambiance. Their winter-summer comfort function maintains a pleasant interior atmosphere throughout the year, with the sheen of its coating giving the space a touch of elegance.

## TECHNICAL SPECIFICATIONS

ESG tempered glass is, on average, 4 times more resistant than a standard glass to changes in temperature, strong winds and impacts. When cracked, it breaks down into small pieces without any sharp edges.

Laminated glass is composed of two or more simple glass sheets glued together with a PVB film which, in case of breakage acts as a medium to which the shards remain glued, therefore preventing possible accidents.

Tempered glass aims to protect both users against accidents and buildings against break-ins.

For design purposes or to protect you from prying eyes, Optimedia offers you a wide range of decorative glass with a large number of models, textures and colors.

Also, for added style and elegance, you can choose between georgian and astragal bars. These can be of different sizes, colors and shapes, made of PVC or Aluminum.

# Tempered glass: Optimedia ESG

ESG is a type of glass that, following the tempering process, shows a considerably higher resistance to mechanical and thermal stresses compared to ordinary glass (including laminated glass). In case of breakage, ESG glass fragments into small pieces with blunt edges. Its superior mechanical properties recommend it for large glazed elements.

## USES:

**Architectural:** all types of interior or exterior windows, doors and glass assemblies, consisting of independent or linked elements, facades, glazed roofs, stairs and even glass floors;

**Urban furniture:** telephone booths, public transport stations, parapets;

**Interior furniture:** table tops, shower cabins, shelves, furniture.

## WHY ESG (TEMPERED) GLASS?

ESG glass is 50% lighter than laminated glass, thus facilitating its transport and assembly whilst at the same time extending the joinery's life by reducing the load on the hardware.

It is 5 times more resistant to tension, shocks and bending stresses compared to an ordinary or laminated glass of the same thickness.

It reduces the risk of injury in case of breakage, by fragmenting into small, blunt pieces and limits the risk of break-ins.
